Safety Remote Controls

Application:

Remote control system for heavy industrial machinery - Diggers, Trucks, Ships etc.

Background:

Customer was looking to move away from bulky, less durable industrial connectors and reduce the number of PCBs in their system.

The Challenge:

High-Durability, small size and shock resistance were all key factors. Achieving this and keeping process costs low was critical to the project.

Harwin Solution:

M225 High-Durability connectors offered 100G shock protection. Contacts can be automatically crimped removing costly manual processes that are normally associated with this level of performance.
