## Electronic Fund Transfer Unit

**Application:**

Banking POS terminals.

**Background:**

The customer's POS terminal design involved multiple wiring challenges internally, and individual smaller wires were hard to manage.

**The Challenge:**

A lightweight solution to cable management was requested, that would keep the cables closer to the PCB and route them in an organized manner to assist with final equipment assembly.

**Harwin Solution:**

Compact SMT mounted cable clips for individual equipment wires, giving them simple cable management clips that were assembled with the rest of the PCB, cutting costs with less operations.
