Data Acquisition System

Application:

Embedded computing for defense systems.

Background:

Data gathering and computational analysis units for mobile defense units and vehicles, requiring faultless performance in challenging environments and under vibration.

The Challenge:

Internal board-to-cable connections must be as rugged and environmentally resistant as the rest of the unit construction, and the customer needed reliable connector pairs to ensure signal continuity.

Harwin Solution:

Datamate J-Tek provides the compact high-reliability connection required, with stainless steel jackscrews to ensure signal throughput is maintained in all situations.
